Global and Domestic Logistics, Shipping Timelines, and Risk Allocation

1. Processing Cycles and Order Readiness

- **Warehouse Processing Windows:** All standard orders require 1 to 2 business days for fulfillment picking, software configuration checks, security screening, and protective packing before leaving the facility. Orders finalized after 3:00 PM IST will begin their processing clock on the following business day.

2. Transit Tiers and Delivery Windows

- **Standard Shipping:** Dispatched via ground transport networks. Delivery typically concludes within 3 to 7 business days depending on geographical distance from our primary hubs.
- **Express Shipping:** Routed via air freight queues. Delivers within 1 to 2 business days to major metropolitan areas.

3. International Logistics Frameworks

- **Cross-Border Shipping Rules:** Cross-border shipping is restricted to supported target regions listed during checkout. International orders are subject to strict custom clearings. All localized import customs duties, storage tariffs, and regional taxes are the sole financial responsibility of the importing customer.

4. Exception Handling: Lost Shipments and Address Rules

- **Logistics Investigation Triggers:** If an active tracking number shows no progression past the estimated delivery window, the user must notify customer support to initiate an official tracer case with the logistics carrier. Investigation processes take up to 48 hours before a package is declared officially lost and a replacement is sent.

- **Address Modification Constraints:** Shipping address modifications can be processed through the backend only while the order status remains "Processing". Once a tracking label is generated and dispatched to the carrier, no modifications can be executed for security reasons.
