System Application User Manual & Portal Interface Navigation

1. System Modules and Structural Functionality

- **Account Dashboard Hub:** The central interface dashboard consolidates real-time information, reflecting recent order transactions, current subscription states, system security alerts, and outstanding open help desk tickets.
- **Profile Customization Settings:** The profile management workspace allows users to update legal names, primary contact info, default billing/shipping address books, account passwords, and messaging opt-in preferences.
- **Orders and Purchase Portals:** Allows users to view their complete transactional purchase history, export detailed commercial invoices in PDF formats, generate return authorization barcodes, and track live carrier milestones.
- **Support Portal and Ticket Center:** The dedicated support module allows users to open high-priority support tickets, upload rich media files (logs, system readouts, error screenshots), and exchange messages with assigned technical support specialists.

2. System Protection and Account Security Protocols

- **Identity Protection Requirements:** Users are highly encouraged to access the Security pane to enable Time-based One-Time Password (TOTP) Multi-Factor Authentication (MFA/2FA) via apps like Google Authenticator. Users should regularly audit the device login history list to detect unauthorized sessions.
